L'ANTIC COLONIAL
Inspiring spaces. Inspired by nature

L'ANTIC COLONIAL

Inspiring spaces. Inspired by nature

The UN Global Compact is a voluntary initiative via which L'ANTIC COLONIAL S.A. and other participating companies undertake to align their operations and strategies with ten universally accepted principles in the areas of human rights, labour, the environment and anti-corruption. In terms of the number of participants, with six thousand in over 135 countries, the Global Compact is the world's largest corporate citizenship initiative. It is a framework for action aimed at boosting the social legitimacy of corporations and markets. Those companies that adhere to the Global Compact share the conviction that business practices based on universal principles contribute to building a more stable, equitable and inclusive global market that promotes more prosperous societies.

Businesses, trade and investment are basic cornerstones in ensuring peace and prosperity. However, in many areas, business is frequently associated with serious dilemmas such as exploitation, corruption, inequality and obstacles that hinder innovations and entrepreneurialism. Corporate social responsibility builds trust and social capital, while contributing to development and sustainable markets.

L'ANTIC COLONIAL

NATURAL
STONE

NATURAL STONE

BI0prot

Bioprot is a liquid treatment. Once applied, it radically reduces the domestic bacteria most commonly found throughout the home, including kitchens and bathrooms.

This transparent, non-toxic liquid creates a barrier that prevents bacteria from growing on surfaces.

All stone products by L'Antic Colonial are protected with this treatment. With BI0prot, our stone is assured an almost unparalleled level of safety and cleanliness. The treatment has been designed with the whole family's safety and health in mind.

HOW IT WORKS

-Bioprot is based on the use of nanoclays, functionalized with silver particles.

-Bioprot's silver ions interact with the cellular membranes of bacteria, preventing nutrients from reaching the latter or leading to the release of their cellular contents-

-The nanoclay-anchored silver particles are evenly spread across the surface of the protected stone, ensuring uniform, long-lasting anti-bacterial protection.

PROPERTIES

-Based on silver, a safe inert metal for humans, whose anti-bacterial properties have been known since ancient times.

-Bioprot prevents the surface formation of fungus, mould, bacteria and other microorganisms.

-Thanks to its properties, it provides anti-microbial protection against salmonella, legionella and pseudomonas, among other bacteria.

-It prevents the build-up of odours and stains.

TOUCH

Touch by L'Antic Colonial is an innovative protective treatment, researched and developed by the firm's technical team. With it, full protection on all six sides is achieved, preventing the appearance of efflorescence, damp or flaking, while conserving the stone's technical properties and its visual appeal. This makes the stone perfect for use as outdoor cladding.

HOW IT WORKS

- Touch ensures water repellent protection on all sides.
- It creates a barrier against atmospheric agents and damp from the subsoil.
- It prevents the appearance of damp, efflorescence or flaking.
- It prevents the stone from ageing or decomposing.
- It allows the stone to breathe.
- It does not alter the colour or texture of the stone

NATURAL STONE / FINISHES

POLISHED

Featuring a mechanically achieved high-gloss finish.

CLASSICO

Featuring a mechanically achieved satin finish.

HOME

Through mechanical brushing, a smooth, satin, silky finish is achieved. Practical and easy to care for, it can be used on walls and floors.

TEXTURE

A natural, rustic finish with a rough, grooved texture is achieved by pounding the stone with pointed machine heads

SAND HOME

Featuring a very slightly rough surface, achieved by sandblasting the stone.

LINED HOME

Featuring an uneven, grooved finish, achieved by scratching the stone with diamond heads.

TUMBLLED

The stone is naturally aged to give it a warm, traditional look

FLAMED

Featuring a rough texture, achieved through exposure to fire.

FLAMED HOME

Featuring a rough texture, achieved through exposure to fire and mechanical brushing.

NATURAL

The natural relief surface of slate and quartzite is conserved, although the inner sides are calibrated to make the stone easy to lay

BHUTAN NATURAL BIOPROT

Butech recommends the following grout: **colorstuk rapid antracita**

Description	Format Cm	Format In	Sap	Kea	Group	Pz/Cj	M2/Cj	Cj/Pal	M2/Pal	Kg/Cj	Kg/Pal
	30x30x1,2	11 3/4"x11 3/4"x3/8"	100069632	L119165081	G-139	8	0,72	50	36	28,24	1412
	30x60x1,2	11 3/4"x23 5/8"x3/8"	100069634	L112995111	G-142	4	0,72	44	31,68	23,76	1045,44
	40x80x2	15 3/4"x31 1/2"x3/4"	100081435	L106200181	G-173	1	0,32	78	24,96	19,23	1499,94

***NOTE:** The blackboard is a rock peelable, ie consists of different layers are deposited one above the other and which eventually can be detached, without affecting the qualities of the product. For the relief of the slates is important when grout is to be filled at least possible parts for easy cleaning and prevent further joint is embedded between the different reliefs. This is usually found with metal incrustations that are inherent to the slate.

Mixture of natural quartz glass and resin bonded, which allows a material that is very resistant to scratching and acids.
Likewise it has a low absorption coefficient in liquid and high stain resistance.

DQS Black

Butech recommends the following grout: **colorstuk 0-4 negro + cl-stuk**

Description	Format Cm	Format In	Sap	Kea	Group	Pz/Cj	M2/Cj	Cj/Pal	M2/Pal	Kg/Cj	Kg/Pal

NATURAL STONE / TECHNICAL INFORMATION

RECOMMENDATIONS FOR LAYING, PROTECTING AND SEALING THE JOINTS OF NATURAL STONE.

1. INSTALLATION SUBSTRATE.

The "thin layer" installation method is recommended. Therefore the installation substrate should be dimensionally stable and non-deformable, with any possible contractions due to drying having taken place. The entire surface and thickness of the substrate should be compact. It should be completely free of dust, grease or any other substance that may hinder adhesion. Use a 2-metre rule to check that planarity is not off by more than 2 mm.

2. INSTALLATION.

We recommend the adhesive ONE-FLEX. Its ease of use, excellent adjustability, zero vertical slippage and thixotropic properties give it outstanding performance. Suitable for use both indoors and out. Due to its excellent flexibility and adherence, it can be used with a variety of substrates, such as existing ceramic tiles, floors with built-in heating and outdoor terraces. ONE-FLEX is mixed with water in a proportion of 38 %. The size of the notched trowel used to apply the product will depend on the sizes of the pieces being installed. It is important not to lay tiles so that they are touching one another. They are manufactured in a totally artisanal fashion and the sizes of each tile may vary slightly. Suitable joints should be left between the tiles, proportional to the size of the piece. It is extremely important that floors are given expansion joints. These shall not protect an exterior surface area of more than 16 m². Perimeter expansion joints of 8 to 10 mm should also be left in the different rooms.

3. GROUTING OF INSTALLATION JOINTS.

This process should be carried out 24 hours after the protector has been applied. We recommend the use of the COLORSTUK 2-12 range, as its grain size distribution is in accord with joint size. Mix the product with water until a creamy clot-free paste has been obtained. Use a hard rubber trowel to apply the product, repeatedly passing it over the joints in a diagonal direction. Pick up any excess product with the trowel. The surface should be cleaned with a fine, hard sponge once the grout has begun to harden.

4. PROTECTION OF NATURAL STONE.

All natural stone from L'Antic Colonial is supplied protected (except Multiformats and Nepal Gold). For this purpose, we use a high quality water-oil repellent sealer that protects the stone from moisture, saltpetre and other household stains, while also enhancing the natural colour of the stone. Please note however that the properties of the tile may vary slightly following the application of the protection due to differences in porosity and texture, inherent to the stone. The natural stone supplied protected from the factory is ready for installation.

In normal conditions, a further application of any other sealer is not necessary. Nevertheless, an additional application of FILA FOB or FILA STONE PLUS on a pre-protected stone surface is also possible to deepen the tone, protect the joints or for any special circumstances, as required. These are applied as follows:

After checking that the stone is thoroughly clean and dry, proceed to apply the protector that best suits our needs. Both protectors should be applied undiluted, using a fine foam roller, in two criss-crossed coats directly on the pieces. The product should only be applied once. If the protection is applied to flooring, avoid walking on the floor until the protector has had time to dry completely. All these products protect the marble from moisture stains, saltpetre and other household stains. Depending on the desired finish, apply one of the following products:

-FILA FOB: Natural Effect.

-FILA STONE PLUS: Intense lustre effect.

5. CARE.

INDOORS: Clean regularly with water and a neutral soap. Depending on the volume of usage, we recommend you protect the floor again, after a thorough clean, should you observe that the protection is wearing away. To clean it, we recommend FilaCleaner.

OUTDOORS: If the surface is very exposed to the weather, we recommend washing it once a year with a slightly acid solution of FilaCleaner to remove any lime scale that has built up due to the weather conditions. Stone tiles used in outdoor environments tend to change in appearance over the course of time. Traffic, rain, sunlight, etc. all affect the stone's surface, enhancing it in a natural and exclusive manner. To improve the resistance of exterior stone tiling to staining, we recommend the application of one coat of FILAFOB or FILASTONE PLUS every two or three years after first washing the surface with FILACLEANER.

Natural stone is particularly susceptible to variations in shade and thickness; a fact that customers should be made aware of.

L'Antic Colonial offers 4 different natural stone finishes:

Antiqued

Pieces are naturally aged in order to achieve a warm traditional look that fills homes with a classical and personal touch. The variety of colours and formats available can be used to create highly creative layouts.

Reminders:

1. The surfaces of marble and antiqued stone are usually pitted with holes that need to be filled with tile grout.
2. It should be noted that antiqued travertines are not suitable for use as worktops.
3. Larger formats (30 x 30 and above) must be handled with care.

Classic

A soft satiny finish is achieved by brushing the stone surface. In the case of travertines, surface pores are filled with cement beforehand. The classic finish combines all of the ingredients necessary to make it the perfect choice for both highly traditional and cutting-edge settings.

Reminders:

1. Travertine with a classic finish is only recommended for residential use in interiors.
2. Holes may occasionally appear after installation that are easily repaired by filling them in with grout.

Polished

Polished stone is characterised by a high lustre achieved with mechanical processes, making it ideally suited for a host of different decorative applications. It infuses settings with personality and radiance.

Reminders:

1. Delhi, Bombay and Bangalore slate with a polished finish are products with a high degree of bending strength but which may become scratched if they are exposed to heavy traffic. This is an inherent characteristic of the product that should be taken into account, only recommending this product for residential areas with little traffic. Nevertheless, if scratches do appear, they can be lessened by applying a protective treatment for natural stone.
2. Polished Travertine is only recommended for residential use in interiors.
3. Holes may occasionally appear after installation that are easily repaired by filling them in with grout.

Natural Relief

The fascination produced by genuine slate and quartzite increases once it is known that these are natural products suited to any setting. In this same spirit, L'Antic Colonial has maintained this natural relief on some of its slates and quartzite's, while calibrating the underside of pieces to facilitate installation

Reminders:

1. Slate is an exfoliative rock. This means it is made up of different layers, one on top of the other, which may eventually flake off; however, this does not affect product quality.
2. Given the relief of slate, make sure that pieces are blemished as little as possible when grouting joints so as to make cleaning them afterwards easier and to prevent grout from getting lodged in the crevices.

DQS / TECHNICAL INFORMATION

INSTALLATION - CLEANING - MAINTENANCE

STORING DQS

Avoid exposure of tiles to direct sunlight. Do not leave material unprotected IN THE OPEN AIR, prior to installation. Tiles mounted on triangular frames or packed in wooden boxes should be stored indoors wherever possible.

INSTRUCTIONS FOR LAYING

Preparation of the screed

Substrates (screeds) should be thoroughly dry (residual moisture must not exceed 2.5 %), stable, solid, compression-resistant, correctly levelled and free from dust, grease, wax, paints, stripping agents or any other element that may hinder adhesion.

Screed maturity is calculated at between 6 and 8 days per cm thickness, unless quick drying cements are used. Any cement substrate, tiles or marble already in existence should be solid and crack-free, firmly attached to the base, able to resist predicted loads and completed with suitable structural joints.

How and when to lay the tiles

Ambient temperature should be between +5° and +30° C; the residual humidity of the substrate (screed) must not be above 2.5 %; the difference in the level of the substrate must not be greater than 3 mm/l per m. Wet or dry cutting with diamond discs should be used to cut tiles. We recommend that larger tiles are laid using a suction cup. To ensure that all of the tile surface is in contact with the substrate, gently tap the tiles with a rubber mallet to prevent the formation of air bubbles and hollow spaces. To ensure the correct laying and alignment of the tiles, insert nylon spacers between the tiles to keep the joints open.

Recommended adhesives

When installing DQS, the traditional method using sand and cement (mortar) must be avoided at all costs. Instead, we recommend the use of two-component fast drying adhesives, consisting of: component A (sack of cement) and component B (tin of latex), especially designed for use with DQS, and which react well to thermal stress and strain. These should be C2FTE type class S2 (EN12004, EN: 12002).

L'Antic Colonial recommends the use of SUPER ONE+ UNILAX by Butech.

The above recommendation is also valid for use with floors laid over radiant floor heating systems or in very hot climates where the material is subject to significant expansion.

An R2T (EN:12004) adhesive should be used with flooring that will be exposed to direct sunlight.

L'Antic Colonial recommends the use of Politech by Butech.

DQS tiles are supplied finished and ready for laying.

They have been calibrated, ground, polished and bevelled.

DQS tiles absorb the minimum of water as they are manufactured using high pressure vacuum industrial processes. The result is a high level of compacting, compounded by the low percentage of structural polyester resin subject to catalysis while hot. As a result of the compacting and the minimum levels of water absorption, these tiles cannot be laid using the traditional cement and sand (mortar) system, which requires the use of large quantities of water.

If the water cannot escape through the screed or the joints, the DQS tiles may become totally misshapen.

When laying flooring or cladding INDOORS, we recommend the use of two-component adhesives.

For special uses or on certain screeds, we recommend a high performance adhesive (two-component polyurethane adhesive). This permits the adhesion to PVC, metal, wood, etc., especially in moist locations, with the use of large formats and in environments with large swings in temperature (and the resultant risk of expansion), and in zones exposed to sunlight. The adhesive is prepared by pouring hardener B into the mixture and then stirring with a mechanical mixer to obtain a completely uniform paste.

The use of DQS OUTDOORS is not recommended, except in certain specific cases: cladding of well-ventilated walls that use a suitable mechanical anchorage system.

Use of adhesives

The correct use of an adhesive guarantees that the DQS adheres well. We recommend the adhesive is applied with a notched trowel, ensuring that the quantity spread over the substrate (screed) covers at least 80 % of the DQS tiles.

To lay larger formats, (60 x 60 cm and larger) and in zones with heavy traffic (hospitals, shopping centres, etc.), we recommend the double gluing system, (adhesive also applied on the reverse of the tile) to ensure that 100 % of the surface is impregnated with the adhesive. Once the tiles have been laid, we recommend placing a weight of approximately 18-20 kg on the 4 corners of the tiles for a few hours, until the adhesive has hardened. This will prevent the corners from curling.

Always follow the instructions and the recommended doses.

The size of the notched trowel will depend on the size of the tiles and the condition of the substrate (screed). We recommend you apply a small amount of adhesive each time, making sure that the tiles are laid within the adhesive laying time.

Grouting the joints

Tiles must never be laid without joints. The width of the joints depends on the size of the tiles in accordance with European legislation.

(Minimum values of 3 to 5 mm):

1 cm wide perimeter joints should be left around walls and around the perimeter of tiled areas. 0.5 cm wide expansion joints should be inserted every 40 m² or every 8 linear metres. DQS has a thermal expansion of between 1.5 and 2 mm per lineal metre for a temperature difference of 40° C. As a result, tile joints of at least 3 mm should be left between tiles.

The joints should be grouted with a high performance mortar ready for use in the required colour. For example, COLORSTUK grouting cement by Butech, adding CL-stuk latex additive to the mix so that any expansion movement by the tiles is absorbed.

Expansion joints

The expansion joints should be cut once the floor has been laid, dividing the flooring into squares measuring 4x4 metres. Joints should be wide enough to be filled with a monocomponent silicone sealant around the perimeter and where they meet walls, columns, steps, etc.

Structural joints

Structural joints must be respected, and should be clearly visible in the screed and specified in the project; in new buildings they should be placed in areas where the ground has settled and "natural" openings have appeared over the years.

Installation in zones subject to direct sunlight

In zones subject to significant exposure to direct sunlight (e.g. by windows, in direct light) the windows should be made using total UV protection glass, and the tiles/panels laid using a fast-drying two-component polyurethane adhesive which offers improved elasticity. In this situation, recomposed quartz is subject to demanding conditions and significant strain.

DQS is not recommended for use OUTDOORS.

INSTRUCTIONS FOR CLEANING AND CARE OF DQS

REGULAR CARE

Required products:

FILACLEANER (a neutral detergent), DETERDEK (a slightly acid detergent).

- FILACLEANER

Solution: 30 g of product to 5 l water.

Coverage: From 25 to 35 m² (using the recommended proportions).

- DETERDEK (do not use with materials containing mother of pearl).

Solution: 1 part product to 2 parts water (1 l per 2 l water).

Coverage: From 70 to 100 m² (using the recommended ratio).

INSTRUCTIONS FOR CLEANING

Clean the surface with our neutral detergent FILACLEANER or the slightly acid detergent DETERDEK, diluted in the recommended proportions. Rinse well after washing.

NOTE FOR MATERIALS THAT ARE HARDER TO CLEAN

From time to time, clear-coloured flooring may need to be cleaned with undiluted DETERDEK; always rinsing the floor well afterwards. Do not use DETERDEK on surfaces containing mother of pearl.

TROUBLESHOOTING

A cloudy surface when seen with the light behind you. The floor stains easily. In most cases, this is because unsuitable cleaning products have been used. These leave a thin surface film behind that makes it easier for dirt to build up.

Product required: DETERDEK (slightly acid detergent)

Solution: undiluted

Coverage: From 20 to 30 m²/l

Recommended cleaning tools: adjustable mop stick + soft white mop.

INSTRUCTIONS FOR CLEANING

- Spread a thin, uniform coat of DETERDEK across the floor and leave for 15 to 30 minutes, rubbing the floor surface from time to time.

- Then rinse well with clean water. Repeat the process if necessary. Never use DETERDEK on surfaces containing mother of pearl.

IMPORTANT NOTE

There are many products on the market for first-time cleaning and the regular care of floors, but they are not all suitable. Avoid acid or alkaline cleaning products, ones containing wax, solvents, ammonia, sodium hypochlorite, Marseille soap or silicon-based products (normally called polysiloxane on the product label). If, as a result of heavy traffic, the colour of the flooring turns grey (in the case of pale-coloured flooring), we recommend you alternate your normal cleaning product with FILACLEANER, a detergent with a neutral pH, and DETERDEK, in the recommended solutions, and rinse well afterwards. By alternating with DETERDEK and FILACLEANER, you will be able to keep your floor absolutely clean. Remember that DETERDEK

L'ANTIC COLONIAL

NOOHN MOSAICS

MOSAICS

SYMBOLS

Wall Coverings: Skyline Tiral Bombay (4,8) 29x29x1cm, Ruggine Titanio 33,3x100 cm (Venis)

Paper-faced product. A number of mosaic styles are paper-faced to preserve the same characteristics when laid as the mesh-mounted version. This system is particularly suitable for permanently wet zones.

Mesh-mounted product. Most of L'Antic Colonial's mosaics have been laid on a mesh for quick and easy installation. With this system, curved areas can be covered thanks to the mobility of the pieces.

A product that stands out for its uneven surface.

A product with a reflective surface.

A product with a non-shiny surface.

Wall Coverings: Treasures Bronze Emperador (1,2x2) 29,8x30,6x0,8 cm, Shine Dark 33,3x100cm (Venis)

NOOHN STONE MOSAICS / TECHNICAL INFORMATION

INSTALLATION INSTRUCTIONS

1. PREPARING THE SUBSTRATE

Surfaces where the material is to be laid must be smooth and consistent, and dry and clean. They should be levelled to create a white background, using specific products for levelling layers thicker than 2mm. To keep the levelling material in good condition, the environmental temperature must be between 5°C and 30°C.

2. LAYING THE MOSAICS

To ensure that the mosaics are correctly laid, we recommend the use of white One-Flex, a high-performance cement-based adhesive which is specially designed for laying terracotta mosaics, stone mosaics, glass mosaics and porcelain tiles. Use the smooth side of a notched trowel to spread the adhesive evenly over the wall and then "comb" it with the notched side (minimum notch size 3mm). The adhesive should not be spread all at one go over large surfaces to prevent it from drying before the mosaics are laid.

To lay the mosaic sheets, press them down evenly with a rubber trowel and make sure that the distance between each sheet is the same as the joint between the mosaic chips to ensure a uniform appearance and joints of the same width. If there is a particularly big joint between the sheets, separate some chips from the mesh backing with a sharp instrument and rotate them to ensure more subtle gaps and an optimum random pattern. Before grouting them, leave the adhesive to dry for at least 24-48 hours. After this drying time has elapsed, clean the surface with a moist cloth and leave to dry before grouting.

3. GROUTING (only applicable to mosaics with joint)

We recommend the use of Colorstuk Rapid, a fast setting grouting mortar available in different colours, with an excellent mechanical resistance, low water absorption and anti-fungal qualities. Colorstuk in black or anthracite should not be used, as it may be difficult to clean the tile joints.

Application: Spread the grouting material using a rubber trowel, filling in the joints completely. Use the same trowel to remove any excess material.

Cleaning after grouting: Before the grouting material sets, any remains must be removed with a sponge or cloth. The grouting material must not be allowed to dry too much before doing this or it will hinder the cleaning of the mosaics. This operation must be repeated at least two or three times to ensure perfectly clean mosaics, rinsing the surface thoroughly with water, using a sponge or cloth.

4. CLEANING

Use a sponge or cloth to remove any traces of adhesive before it sets. It is important that the grout does not dry too hard as this may make it difficult to clean the mosaic tiles. This operation should be repeated at least two or three times until the mosaic tiles are thoroughly clean. Clean the surface of the tiles well using a sponge or cloth. The use of detergents or abrasives as cleaning agents may cause irreversible damage. If you are not sure, please contact the manufacturer.

NOOHN GLASS MOSAICS / TECHNICAL INFORMATION

INSTALLATION INSTRUCTIONS

1. PARING THE SURFACE

The surfaces where the material is to be laid must be smooth and consistent, and be dry and clean. We recommend levelling the surface to create a white background. Specific products should be used for levelling layers thicker than 2mm. To maintain the correct condition of the levelling material, the surrounding temperature must be between 5°C and 30°C.

2. LAYING THE TILES

2.1 General laying instructions.

To ensure laying the mosaic correctly, we recommend using white One-Flex, a high-performance cement-based adhesive which is specially designed for installing glass mosaics and porcelain tiles. Use the smooth side of a notched trowel to spread the adhesive over the wall, and then "comb" the adhesive with the notched side (minimum notch size 3mm). The adhesive must not be spread over large surfaces, to prevent it from drying before laying the material.

2.2.a Instructions for laying film-faced mosaics.

Lay the mosaic sheets so that the side with the film is facing the tile layer. After laying the sheet, the surface must be pressed down evenly, using a rubber trowel, making sure that the distance between each sheet is the same as between each chip, so that the final result is uniform and all of the joints are the same distance apart.

When the adhesive is dry enough, remove the protective film from the surface and clean any remnants of paper with a damp sponge. Then remove the film by holding one corner, slowly pulling it off diagonally and in line with the substrate, taking care not to detach the pieces. Correct any misalignments using a small spatula. Repeat all of the steps until completing the surface to be tiled. Before grouting the adhesive must be left to dry for at least 24-48 hours. Once the adhesive is dry, clean off any remnants from the mosaic chips using a nylon brush and water, then cleaning with a damp cloth. Allow to dry before grouting. If necessary, a stronger cleaning product can be used, testing the surface beforehand to make sure it does not damage the material.

2.2.b Instructions for laying mesh-mounted mosaics.

After laying the sheet, the surface must be pressed down evenly, using a rubber trowel, making sure that the distance between each sheet is the same as between each chip, so that the final result is uniform and all of the joints are the same distance apart. Before grouting, leave the adhesive to dry for at least 24-48 hours. Once dry, clean the surface with a damp cloth and leave to dry before grouting.

2.3. Laying mosaics in swimming pools.

Apart from following the General Laying instructions, a capacity test must be carried out on the pool shell to check for leaks, if any waterproofing treatment is required, and a static test of the structure.

Remember that the products used for levelling are not waterproof.

The working area must be protected from rain and direct sunlight, taking special care to avoid water pooling on the surfaces where tiles have been laid for at least 20 days after work is completed. The covering should also be used to maintain the temperature of the substrate between 5°C and 30°C from the start of the laying process until at least 10 days after work is completed.

To ensure that the adhesive bonds correctly, any remnants of the product should be removed with a cement remover or similar product.

Important: The pool must not be filled until at least 20 days after completing work on laying the mosaic.

3. GROUTING

We recommend using Colorstuk Rapid, a fast setting grouting mortar which is available in different colours, with excellent mechanical resistance, low water absorption and anti-fungal qualities.

Application: Spread using a rubber trowel, filling in the joints completely, using the same trowel to remove any excess material.

Cleaning after grouting: Before the mortar sets, any remnants must be removed with a sponge or cloth. This operation must be carried out at least twice, rinsing the surface thoroughly and then removing any remnants of mortar the following day in the same way.

4. INSTRUCTIONS FOR CUTTING GLASS

Follow the instructions given below in order to work with the glass correctly.

The following tools are recommended, depending on the type of work to be carried out:

- For small cuts and clippings, we recommend using the special Butech clippers for glass mosaics.
- Dry cuts should be made using a SIGMA machine, specially designed for cutting glass mosaics.
- Cuts made on whole sections should be made using a water-cooled Butech diamond disc cutter, specially designed for glass mosaics with a continuous crown; after marking the required cuts on the mosaic or glass section with a pencil, cut the section using a series of increasingly deeper radial cuts to prevent it from breaking.
- To drill holes in glass sections to hang mirrors, countertops, lamps etc., a FLEX BHW 1549 VR drill with water supply and Butech diamond bits should be used. These bits must be water-cooled, and are available in 6, 8, 10 and 12mm diameters.

Important: Rubber washers must be used to ensure a secure fit and to prevent the glass from breaking.

5. CLEANING

For daily cleaning we recommend using glass cleaner and neutral soaps, then drying with a soft clean cloth to prevent scratches and flaking. For perfect maintenance we recommend applying a marble repairer or polish to the glass surface once a year.

Comments:

- When laying sections with a matt finish, take special care not to stain the front part with adhesive or grouting in order to maintain a perfect appearance.
- The use of detergents and abrasives such as cleaning powders may cause irreparable damage to the sections. If you have any doubts, contact the manufacturer.

NOOHN MIX MOSAICS / TECHNICAL INFORMATION

INSTALLATION INSTRUCTIONS

1. PREPARING THE SUBSTRATE

The substrate should be smooth, solid, clean and dry. Level the substrate to create a white base. If it needs to be levelled by over 2mm, specific levelling products should be used. Levelling products should be applied at an environmental temperature of between 30 and 5°C.

2. LAYING MOSAICS

To ensure properly laid mosaics, white One-Flex should be used. This high-performance cement-based adhesive is specially suited for laying mosaics. Use the smooth side of a notched trowel to spread the cement-based adhesive evenly across the wall. Then comb it with the notched side (using a minimum 3mm notched trowel). Do not spread the adhesive across large surface areas in case it dries before the mosaics can be laid. Place the mosaic sheets onto the adhesive and press them down evenly with a rubber trowel. Make sure that the gap between each sheet is the same as the joint between the mosaic chips, so that they have the same uniform appearance and all the joints have the same width. Before grouting the joints, leave the adhesive to dry for at least 24 to 48 hours. After this drying time has elapsed, clean the surface with a moist cloth and leave it to dry before beginning the grouting process.

3. GROUTING THE JOINTS (only applicable to mosaics with joint)

Colorstuk Rapid should be used as grouting. This high-tech, fast-setting grout comes in a range of different colours. It stands out for its high mechanical resistance, low water absorption rate and resistance to mould.

Application: Use a rubber trowel to spread the grout, making sure that the joints are filled completely. Use the same trowel to remove any surplus grout.

Post-grout cleaning: Before the grout sets, remove any surplus remains with a sponge or cloth. Repeat this process at least twice, rinsing the sponge or cloth out well. The following day, repeat the process one last time to remove any final remains.

4. CLEANING

Use a neutral soap detergent for everyday cleaning, drying the surface afterwards with a soft clean cloth so as not to scratch or chip the mosaics.

Observations:

- When mosaics with a matt finish are laid, make sure that the top surface is not stained with adhesive or grouting material, since it might spoil their appearance.
- Abrasive cleaners or detergents, like scouring powder, might cause irreversible damage to the mosaics. If in doubt, contact the manufacturer.
- Minor variations in size or shade are typical of hand-made mosaics.

NOOHN METAL MOSAICS / TECHNICAL INFORMATION

INSTALLATION INSTRUCTIONS

The following instructions are aimed at ensuring well-laid Mosaico Acero tiles. All the work should be performed by a skilled professional. We advise you to read the following instructions carefully.

1. PREPARING THE SUBSTRATE

The substrate on which the Mosaico Acero tiles are to be laid should be smooth and consistent. Make sure that it is clean and dry. We advise you to level the surface to create a white background. When there are deviations in flatness of over 2mm, use special levelling products, making sure that the environmental temperature is between 30°C and 5°C to maintain the product in the right condition.

2. LAYING MOSAICO ACERO TILES

2.1 General tile laying procedures.

To ensure the correct laying of the Acero Mosaic, we recommend you use white one – Flex, a high performance cement-based adhesive (C2TES1 EN12004). Use the flat side of a notched trowel to spread the cement – glue evenly across the wall, then “comb” it with the notched side (minimum notch size 3 mm). Do not spread the cement-glue over large areas in one go to prevent it from drying before the tiles are laid. After laying the mesh sheets, press them down with a rubber trowel and make sure that the distance between the meshes is equal to the distance between each of the tiles to ensure a uniform appearance and that all the joints are evenly spaced. Allow the cement-glue to dry for 24 hours before grouting.

3. GROUTING THE JOINTS

Before the tiles are grouted, they should all be absolutely clean, with no dust remains. Any surplus adhesive from the tile-laying process should be removed while it is still wet, and the rest of the adhesive should be left to dry before starting to grout the tiles. We advise you to use Colorstuck (always with a fine grain). This high-performance, fast-drying grouting mortar is available in a range of different colours. It has an excellent mechanical resistance, low water absorption rate, and resistance to mould.

Cleaning up after grouting: Any traces of adhesive should be wiped away using a sponge or cloth before the adhesive sets. This should be repeated at least twice to ensure that there are NO traces of mortar remaining on the surface. GREAT CARE SHOULD BE TAKEN IN THIS OPERATION TO AVOID SCRATCHING THE METAL SURFACE.

4. CUTTING MOSAICO ACERO TILES

To handle Mosaico Acero tiles properly, follow these instructions:

Use a radial tile saw with a steel cutting blade to cut the mesh-mounted tiles. After cutting them, lay the cut part so that it is concealed. (Being a metal, dark patches will always remain where the material has been cut). To perforate Mosaico Acero tiles in order to hang mirrors, counter tops, wall lights etc., we advise you to use special drill bits for perforating steel.

5. CLEANING

For everyday cleaning, use a neutral soap and then dry the surface with a soft, clean cloth to avoid scratches. To maintain the tiles in good condition, we advise you to treat the surface with a repair product or polish.

Using detergents and abrasive materials like cleaning powder can damage the mosaics irretrievably. If in doubt, contact the manufacturer.

Small variations in calibre are typical of mosaic tiles that are mesh mounted by hand. We advise you to check the tiles before laying them.

NOOHN WOOD MOSAICS / TECHNICAL INFORMATION

RECOMMENDATIONS FOR INSTALLATION & CARE

1. SELECTING THE MATERIAL

Like all natural materials, wood can vary slightly in shade. The best way to ensure harmonious end results is to make up a test panel on the floor, mixing mosaics of different shades before laying them on the wall.

These jointless relief mosaics are ideal for use as wall coverings.

Wood mosaics should not be used outdoors or in places that are in direct contact with water.

2. LAYING THE MOSAICS

When mosaics are laid on masonry walls, make sure that the substrate is completely dry. Use a thin coat of bt1000 or bt3000 dispersion adhesive by Butech to lay the mosaics. These adhesives are sold ready to use. They do not need mixing with anything. Just open the tin and apply the adhesive. To lay the mosaics on a wood surface, use carpenter's or PVA glue.

Wood mosaics should be laid without joints to prevent water from filtering down between the mosaics.

3. CLEANING & CARE

Generally speaking, it is sufficient to clean the mosaics with a damp cloth.

NOOHN FUSION MOSAICS / INFORMACIÓN TÉCNICA

INSTALLATION INSTRUCTIONS

Glass and metal mosaics

The following instructions are intended to guarantee the correct installation of Fusion Mosaics. All installation work must be carried out by a qualified professional. Please read the following installation instructions carefully.

1. PREPARING THE SUBSTRATE

Surfaces on which the product is to be laid should be smooth and even, and dry and clean. We recommend the surface is levelled to create a white background. For levelling layers of more than 2 mm, we recommend the use of specific products. To ensure the levelling compound is kept in good condition, the ambient temperature should be kept between 30 °C and 5 °C.

2. LAYING THE MOSAICS

To ensure the mosaics are laid correctly, we recommend the use of white one-Flex with a number 6 trowel, a high performance cement-based adhesive. When installing, maintain the verticality so that all the aluminium tiles line up with the grooves and apply the material in the opposite direction to the mosaic so that it grips better. Use the flat side of a notched trowel to spread the cement – glue evenly across the wall, then “comb” it with the notched side (minimum notch size 3 mm). Do not spread the cement-glue over large areas in one go to prevent it from drying before the tiles are laid. After positioning the mesh in place, press down with a rubber trowel and make sure that the distance between the each sheet is equal to the distance between each of the tiles to ensure a uniform appearance and evenly spaced joints. Allow the cement-glue to dry for 24 hours before grouting.

Special care should be taken when using hard or sharp tools to avoid damaging the metallic tiles which may be easily scratched.

Fusion 3D mosaics have a compact format. Nevertheless, traces of the gluing compound may enter between the individual tiles if applied in excess.

3. GROUTING

Please note when grouting that an adhesive with a non-neutral pH could react with the aluminium. Test the adhesive before applying the paste, to confirm that the natural colour of the tiles is not altered by the adhesive. We recommend the use of Colorstuk rapid gris (with the same grain size as the 0-4, but as it is fast-drying it helps to prevent variations in shade, although the 0-4 could also be used), a fast-drying grout, with excellent mechanical resistance, low water absorption rate and resistance to mould. Excess adhesive must be removed while it is still fresh. Wait until the rest of the adhesive has dried before starting the grouting.

Fusion 3D mosaics have a compact format, and therefore do not require grouting.

Application: Spread the grouting mortar across the product using a rubber trowel and fill the joints well. Use the same tool to remove the excess material.

Cleaning up after grouting: Remove any excess mortar before it sets, using a sponge or cloth. Repeat the procedure at least twice, rinsing well. Remove any remains of paste the next day, protecting the product from getting wet. On completion, protection with tapes is not necessary.

4. CUTTING

The following instructions should be observed to ensure the product is handled correctly:

Use a knife or hand saw to cut mesh-mounted mosaics. After cutting the mosaic, sand the cut edge. Remember that some of the tiles are made of aluminium and dark patches may remain on the pieces where the material has been cut.

When drilling holes in the tiles to hang mirrors, countertops, wall lights, etc., use the special drill bits according to whether the tile is made of glass or metal. When drilling glass tiles, we recommend the use of a drill with a FLEX BHW 1549 VR integrated water supply and Butech diamond drill bits. These drill bits must be water-cooled. They are available in a variety of diameters: 6, 8, 10, 12 mm.

Important: Rubber washers must be used to ensure a secure fit and to prevent the glass from breaking.

5. CLEANING

Use neutral soaps for day-to-day cleaning. Acid cleaners or detergents could cause permanent damage to the pieces. Use a sponge or cloth with soapy water or alcohol. Next, dry product with a soft clean cloth to prevent scratching. For perfect care, we recommend applying a repairing agent or polish to the surface.

NOOHN HEXCUBE MOSAICS / TECHNICAL INFORMATION

INSTALLATION INSTRUCTIONS

The following instructions are intended to guarantee the correct installation of glass and mosaic sections. All installation work must be carried out by a qualified professional. Please read the following installation instructions carefully. Safety goggles and gloves should be worn when handling glass to reduce the risk of injury. Minor variations in size and colour are inherent features of handmade glass. Please check the sections before laying.

1. PREPARING THE SURFACE

Surfaces on which the product is to be laid should be smooth and even, and dry and clean. We recommend the surface is levelled to create a white background. For levelling layers of more than 2mm, we recommend the use of specific products. To ensure the levelling compound is kept in good condition, the ambient temperature should be kept between 30 °C and 5 °C.

2. LAYING THE TILES

2.1 General Laying Instructions.

To lay the mosaic correctly, we recommend the use of fr-one, a single-part, technologically advanced adhesive, easy-to-apply and suitable for use with all types of glass mosaics. Its excellent degree of deformation capacity and high bonding strength make it suitable for use in environments requiring extra strength: laying over existing ceramic tiles, walls and swimming pools. Water- and frost-resistant. It complies to European legislation. Thickness up to 15 mm.

Use the flat side of a notched trowel to spread the cement – glue evenly across the wall, then “comb” it with the notched side (minimum notch size). 8 mm). Do not spread the cement-glue over large areas in one go to prevent it from drying before the tiles are laid.

1. Lay the mesh sheets, starting at the bottom and working upwards. Take note of the direction in which each mesh is laid. Continue until the entire surface has been covered. Leave the corners and internal angles.
2. Mark out the straight line on the surface of the mesh to obtain the straight cut required to finish internal angles.
3. Remove each piece that requires cutting.
4. Cut each piece using a wet-cutting diamond saw. To avoid cutting too much or incorrectly, do not cut more than 2 meshes at once.
5. Stick the cut pieces back on the mesh.

2.2 Instructions for Laying mesh-mounted Mosaics.

After laying the mesh sheet, apply uniform pressure to the surface using a rubber trowel, and make sure that the distance between each sheet is equal to the distance between each of the tiles so that the final result is uniform and all the joints are evenly spaced. Allow the cement-glue to dry for at least 24-48 hours before grouting. Once dry, wipe the surface with a damp cloth, and allow to dry before grouting.

2.3. Laying Mosaics in Swimming Pools.

Apart from the General Laying instructions, a capacity test must be carried out on the pool shell to check for leaks, if any waterproofing treatment is required, and a static test of the structure.

Remember that the products used for levelling are not waterproof.

The working area must be protected from rain and direct sunlight, taking special care to avoid water pooling on the surfaces where the tiles have been laid for at least 20 days after work is completed. The covering should also be used to maintain the temperature of the substrate between 5 °C and 30 °C from the start of the laying process until at least 10 days after work is completed.

To ensure that the adhesive bonds correctly, any remnants of the product should be removed with a cement remover or similar product.

Important: The pool must not be filled until at least 20 days after completing work or laying the mosaic.

3. GROUTING

We recommend using Epotech aqua, a high performance, two-component epoxy system, easy-to-apply and clean, and suitable for ceramic and glass mosaics and ceramic tiles.

epotech aqua is suitable for grouting for joints measuring 0 to 10 mm on floors and cladding, both indoors and out. Suitable for residential, industrial and commercial use. Excellent resistance to chemical substances. Suitable for use in swimming pools, spas. Suitable for ceramic tiles with any degree of absorption and format, klinker, natural stone, ceramic and glass mosaics.

Application: Spread the grouting mortar across the product using a rubber trowel and fill the joints well. Use the same tool to remove the excess material.

Cleaning up after grouting: Any traces of the mortar should be wiped away using a sponge or cloth before it sets. This operation must be carried out at least twice, rinsing the surface thoroughly and then removing any remnants of mortar the following day in the same way.

4. INSTRUCTIONS FOR CUTTING GLASS

The following instructions should be observed to ensure the glass is handled correctly:

The following tools are recommended, depending on the type of work to be carried out:

- For small cuts and clippings, we recommend using the special Butech clippers for glass mosaics.
- Dry cuts should be made using a SIGMA machine, specially designed for cutting glass mosaics.
- Cuts made on whole sections should be made using a water-cooled Butech diamond disc cutter, specially designed for glass mosaics with a continuous crown; after marking the required cuts on the mosaic or glass section with a pencil, cut the section using a series of increasingly deeper radial cuts to prevent it from breaking.
- To drill holes in glass sections to hang mirrors, countertops, lamps, etc., a FLEX BHW 1549 VR drill with water supply and Butech diamond bits should be used. These bits must be water-cooled. They are available in a variety of diameters: 6, 8, 10, 12 mm.

Important: Rubber washers must be used to ensure a secure fit and to prevent the glass from breaking.

5. CLEANING

For daily cleaning we recommend using glass cleaner and neutral soaps, then drying with soft cloth to prevent scratches and flaking. For perfect maintenance we recommend applying a marble repairer or polish to the glass surface once a year.

Comments:

- When laying sections with a matt finish, take special care not to stain the front part with adhesive or grouting in order to maintain a perfect appearance.
- The use of detergents and abrasives such as cleaning powders may cause irreparable damage to the sections. If you are not sure, please contact the manufacturer.

BESPOKE PROJECTS

CUSTOMIZED MOSAICS

NORMAL PRECISION SYSTEM:

Customized mosaics with an image made up of uncut square mosaic chips. A high-definition end result is not required. These mosaics are classified into 3 groups, depending on how hard it is to recreate the drawing with mosaic chips:

*The price groups are intended for guidance only and may vary depending on the size of the mosaic.

Low complexity:

G-010*

Medium complexity:

G-011*

High complexity:

G-012*

HIGH PRECISION SYSTEM:

Customized mosaics made up of chips that can be cut and arranged in different shapes to achieve high-definition end results. These mosaics are classified into 3 groups, depending on how complex it is to cut the mosaic chips:

*The price groups are intended for guidance only and may vary depending on the size of the mosaic.

Low complexity:

G-013*

Medium complexity:

G-014*

High complexity:

G-015*

***NOTE:** A ceramic product characterized by a plurality of brightness, no piece is identical to another, due to the traditional manufacturing process. Over time you may see a crackle inherent in this type of Ceramics. This does not affect product performance. Product is glazed with transparent crystal. Not for use on work surfaces, since the use of certain kitchen utensils (kitchen knives, scissors ...), you can scratch the enamel.
